

# AccentXL Body Contouring

At the Integrative Healthcare Center we have many medical devices that address almost all of our patient's concerns.

The AccentXL is a unique, multi-application, Radio Frequency (RF) based platform for the non-invasive treatment of wrinkles, rhytids and the temporary reduction in the appearance of cellulite that is virtually painless. It does this by combining two proprietary radio frequency modes – BiPolar and UniPolar – using separate hand pieces that provide therapeutic heat at different tissue depths within the body.

The AccentXL dual-layer thermotherapy is used for

- Body Contouring
- Wrinkle Reduction
- Skin Tightening
- Rejuvenating Skin

Additionally, the AccentXL offers:

- High patient and clinical staff satisfaction
- Treatment potential over the entire body
- Consistent delivery of results regardless of climate or season
- No expensive disposables, grids or return electrodes

- Expandable platform technology
